# Same Day Treatment in Birmingham

Offering an efficient same-day service, we can 'see and treat' you during your initial consultation. We have state of the art facilities in Birmingham with a fully equipped operating suite on site to allow us to carry out a full range of procedures under local anaesthetic on a 'walk in, walk out' basis. Registered with the CQC and offering competitive fixed price packages for self pay patients. We also accept referrals from your GP or dermatologist.

*"Researched into plastic surgery clinics in Birmingham & found the one with the best reviews - The Staiano Clinic!"*

# We Are Different

We want to break down the barriers to healthcare and make things easier for patients to access help and advice.

The clinic is built on the bedrock of providing service and we believe in doing things differently.

## No Need To See Your GP

You do not need to see your GP. We will write to them after you have seen us (with your permission), so that they are kept informed, but you do not need to bother them for a referral in order to come and see us.

## No Need To Pay For A Consultation

If you have something that you do not like the look of, or would like changed, you do not need to pay for a consultation with one of our surgeons.

We offer a FREE service where you can send us a photograph and we will give you an opinion of what we can do and how much it would cost.

# Send Us A Photo

## 'See & Treat' On The Same Day

Our practice is focused on making life easier for you and giving the best service possible.

We are one of the few clinics in the country to offer a 'See & Treat' service where you can come to the clinic and have an appointment with one of our surgeons and if you are happy with everything, you can proceed with treatment on the same day.

# Mole Removal

You may have just returned from holiday and want reassurance that a mole is nothing sinister, or you may have made up your mind that you would like to have your mole removed.

We offer mole removal with a same-day service and can see and treat you during your initial consultation. Whether it is a mole that has recently changed, or one you just don't like the look of, within a few hours of your consultation, it could be gone forever.

*"I cannot recommend everyone at this clinic highly enough. My facial mole removal was exceptionally quick, and six weeks later I literally have a faint hairline scar left. I just wish I had done it sooner. Thank you."*

Before

After

*"Amazing results so happy had a mole removed I've had for 13 years. I was made to feel at home and very looked after can't recommend enough will definitely use again :)"*

# Cyst Removal

Cysts are lumps located underneath the skin and they can occur anywhere in the body.

They may not cause any symptoms, although occasionally become infected when they can grow and be painful.

Treatment involves removing the cyst wall, which can be done under local anaesthetic on a walk in, walk out basis.

*"Couldn't fault the service from the first phone call to the stitch removal. Would recommend it to anyone. Lovely friendly atmosphere."*

*No need to wait!*

Before

After

*"The whole experience was excellent, professional attentive and caring staff. I would recommend your services without doubt."*

# Scar Revision

Scars cannot be removed but we may be possible to revise your scar to improve it.

If you have a specific problem with your scar, we may be able to help you.

If your scar is:

- raised
- dented
- stretched
- or in an an unfavourable orientation

All of our surgeons are fully trained plastic surgeons and will advise you as to what might be possible.

You can send us a photograph to get an opinion on your options.

*"I had a very deep scar on my tummy & since surgery it's totally different, it's given me much more confidence. I am extremely happy with the outcome. Plus Id like to add Mr Staiano was brilliant, he made me feel totally at ease..."*

# Lipoma Removal

Lipomas are fatty lumps that are felt underneath the skin. They can occur as a single lump or as multiple lumps all over the body.

Occasionally they can be painful but they do not usually cause significant problems apart from the cosmetic appearance.

We can remove lipomas of all sizes and from anywhere in the body. As plastic surgeons we plan our incisions to minimise the scar.

*"Everyone was genuinely fantastic. I had my lipoma excised before under local and it was painful but Mr Staiano chatted pleasantly to me throughout and I never felt a thing. Wonderful."*

# Tattoo Removal

You could be walking out with your problems solved.

Tattoos are becoming increasingly common and mainstream. However, the increase in accessibility and the change in the public perception of tattoos has meant that it is also becoming more common for people to have a tattoo without possibly thinking of the long-term consequences and the fact that it is permanent. Tattoo removal can be difficult, painful and expensive but is increasing in demand.

Excision of the tattoo could be considered for tattoos that have not responded well to laser removal. Tattoo removal by surgical excision is what we specialise in here at The STAIANO Clinic.

Not all tattoos are suitable for surgical excision as it will depend on the size and location of the tattoo. Please feel free to send a photograph of your tattoo for advice on whether it would be suitable for surgical excision.

*"It has saved me so much money, time and pain by getting it all done and removed by excision."*

# Earlobe Repair

Earlobe repair may be required for a number of reasons:

- you may have a stretched or split earlobe hole from wearing heavy earrings
- you may have an enlarged earlobe hole from wearing tribal piercings
- you may have a large earlobe that you would like to have reduced

Whatever the reason, we offer our 'see & treat' service for repair or reduction of your earlobe and we are one of the few clinics in the UK who are able to allow you to keep the original earlobe hole if it is stretched.

Before

After

*"I had my earlobes repaired after they split. My children said I looked like 'pacman'. I arrived for a consultation and had the procedure done immediately. Jonathan was friendly, efficient and I felt confident when I left and I was wearing earrings again a week later. Would definitely recommend. Fab"*

# Inverted Nipple Correction

Inverted nipple correction is a procedure that can be performed on the same day as your consultation with minimal scarring and minimal downtime.

If your nipples have recently become inverted or if you have any associated symptoms, such as a lump in your breast or discharge from your nipple, then it is important that you see your general practitioner to make sure that there is no cause for your nipple inversion.

If your nipples are not always inverted, but will sometimes come out, then it may be worth trying the non-surgical option of a suction cup, known as a 'Nipplette' device as this can improve the situation, although the results are often short-lived and may not be permanent.

Permanent correction of inverted nipples is more predictable with a minor surgical procedure.

*"Very impressed with this place - amazing, friendly and professional staff that relax you and are flexible to your needs. Very happy with result of my surgery and level of aftercare."*

# Areola Reduction

Reduction of the areola is an integral part of a breast reduction or uplift, however, if you are happy with the size and shape of your breasts, but simply feel that your areolae are too large, then an areola reduction may be for you.

Areola reduction is a relatively simple procedure that can be done under local anaesthesia (this means that you stay awake) and can be done on the same day as your consultation (with prior arrangement).

There will be a scar all the way around your areola, the scar is placed on the edge of the areola between the darker skin of the areola and paler skin of the breast. This means that once the scar has faded, after several months, it can blend in well.

Before

After

*"My sincere thanks to all at Staiano. I had a very easy and smooth experience. As someone who has never had such a procedure before, I was reassured and felt that great care was being taken of my needs. Appreciate the communication, treatment, procedure, professionalism, friendliness and aftercare."*

THE STAIANO CLINIC
